

Southern Nevada Veterans Memorial Cemetery
Columbaria & Double Burial Vault Expansion

AGENCY: NV Office of Veterans Services/Southern Nevada Veterans Memorial Cemetery

LOCATION: Boulder City, Nevada

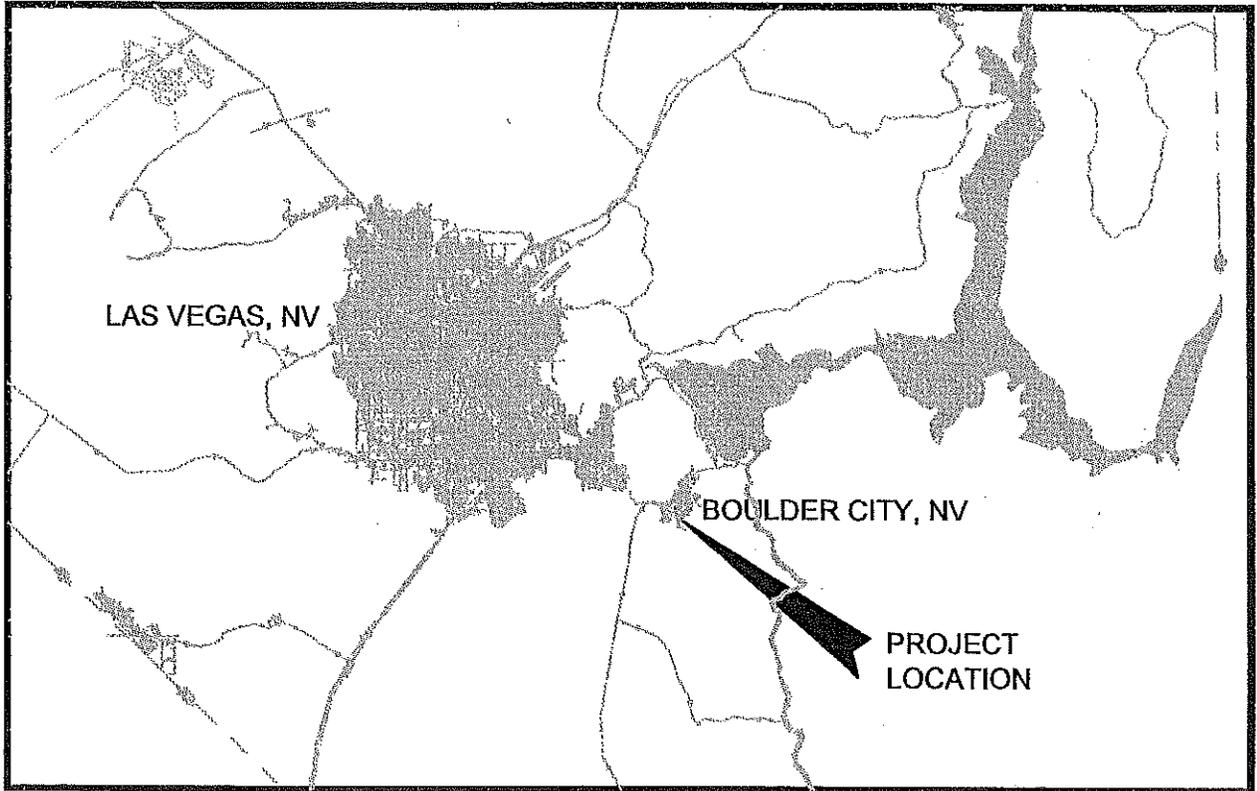

TITLE: Columbaria & Double Burial Vault Expansion

Project Description

The Southern Nevada Veterans Memorial Cemetery (SNVMC) is one of two Nevada state veteran cemeteries and is the second busiest state veteran cemetery in the United States. There are over 29,700 veterans and their dependents interred at the cemetery.

This project will include the construction of a new columbaria section which includes eight separate columbaria walls and will contain 4,000 additional niches. The new sections will be constructed directly opposite the road from the existing columbaria wall thereby increasing the utilization available at the SNVMC to 11-years. The project also includes the placement of an additional 5,991 double depth burial vaults and 50 oversize burial vaults immediately north of the existing maintenance facility. These additional vaults will extend availability of double depth crypts for a total of 12-years. Current burial rates will exhaust the supply of columbaria niches in 2015 and double depth vaults in approximately 2013, this project will expand existing inventory to meet the needs of Southern Nevada's veterans and family members.
